

Check your infrastructure vitals: 4 essentials to building the future of health IT

75%

of healthcare organizations (HCOs) say the culture of their organization has changed or is changing to embrace a digital-first approach.¹

What does it take to realize the future of your digital health evolution? Check your readings against these four vital signs.

1

A feverish passion for patient engagement

More than 80% of healthcare decision-makers said their patients are demanding a more personalized, holistic digital experience.²

52%

of HCOs support wireless technology to integrate patient wearable data with their electronic health record (EHR).³

Consumer technologies empower patients to actively participate in their health management and enable clinicians to make informed decisions based on real-time data.

Technology that beats at a steady pace

During the pandemic, 62% of HCOs implemented piecemeal technology solutions and are now forced to rethink their approach.⁴

Only 8%

of providers are very satisfied with their current unified telehealth communication platform.⁵

When technology compatibility suffers, so does care delivery. It's critical to ensure your infrastructure is equipped to exchange information at the speed of healthcare.

3

The power to breathe life into your digital health evolution

>80%

of HCOs are using advanced analytics in their organization.⁶

Digital transformation initiatives like cloud migration and AI demand scalable, high-performance network technologies with ample bandwidth to provide endless opportunities for growth.

A partnership to keep the pressure down

The lifeblood of every digital healthcare transformation is a technology partner that's ready to deliver on your boldest technology demands — and manage your toughest challenges for you.

With scalable solutions for Ultra-High Speed Data, trusted expertise and a full suite of managed services for SD-WAN, telehealth collaboration and cybersecurity, Spectrum Enterprise is that partner.

80%

of the largest U.S. health systems rely on technology from Spectrum Enterprise.
